

## Quiz-MC

### Q#1:

**Monthly Orders Analysis for Supply Chain Optimization:** An e-commerce company tracks order data in a table orders with columns order\_id, customer\_id, order\_amount, order\_date, and status (e.g., "Delivered", "Pending").

- **Question:** Write an SQL query to calculate the total number of delivered orders and the total order amount for last month of the current year.

### Q#2

**Analyzing Customer Demographics:** A bank has a table customers with columns customer\_id, age, region, and account\_balance.

- **Question:** Write an SQL query to count the number of customers in range (18-25) who have an account balance greater than \$5,000.
